

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 1: Treatment plant operations

Meter replacement work focused on the oldest residential districts. School outreach programs reached classrooms across the service area. Customer call volumes peaked during the summer irrigation season. Laboratory staff processed routine bacteriological samples weekly.

Billing system updates reduced the number of estimated reads. Hydrant flushing was performed on the published spring schedule. Pump station upgrades improved efficiency at two booster sites. School outreach programs reached classrooms across the service area.

Customer call volumes peaked during the summer irrigation season. Billing system updates reduced the number of estimated reads. Meter replacement work focused on the oldest residential districts. Laboratory staff processed routine bacteriological samples weekly.

Hydrant flushing was performed on the published spring schedule. Billing system updates reduced the number of estimated reads. Customer call volumes peaked during the summer irrigation season. Pump station upgrades improved efficiency at two booster sites.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 2: Distribution system maintenance

The authority continued its valve exercising program across the grid. Customer call volumes peaked during the summer irrigation season. Watershed patrols documented erosion near several tributary crossings. Tank inspections found coatings in fair to good condition.

Customer call volumes peaked during the summer irrigation season. Cross-connection control inspections continued at commercial sites. Tank inspections found coatings in fair to good condition. Laboratory staff processed routine bacteriological samples weekly.

Tank inspections found coatings in fair to good condition. Emergency response drills were held with neighboring utilities. The asset register was reconciled against field inspection records. Watershed patrols documented erosion near several tributary crossings.

The asset register was reconciled against field inspection records. Operators completed scheduled filter backwash cycles at both plants. Customer call volumes peaked during the summer irrigation season. Laboratory staff processed routine bacteriological samples weekly.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 3: Customer service

Operators completed scheduled filter backwash cycles at both plants. Watershed patrols documented erosion near several tributary crossings. The authority published its consumer confidence report on time. Billing system updates reduced the number of estimated reads.

Operators completed scheduled filter backwash cycles at both plants. Billing system updates reduced the number of estimated reads. Watershed patrols documented erosion near several tributary crossings. Meter replacement work focused on the oldest residential districts.

Billing system updates reduced the number of estimated reads. Public tours of the treatment plant resumed in the autumn. Supervisory control system patches were applied during low demand. Cross-connection control inspections continued at commercial sites.

Meter replacement work focused on the oldest residential districts. Supervisory control system patches were applied during low demand. Customer call volumes peaked during the summer irrigation season. The authority continued its valve exercising program across the grid.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 4: Water quality monitoring

The authority continued its valve exercising program across the grid. Supervisory control system patches were applied during low demand. The asset register was reconciled against field inspection records. School outreach programs reached classrooms across the service area.

Customer call volumes peaked during the summer irrigation season. Pump station upgrades improved efficiency at two booster sites. Public tours of the treatment plant resumed in the autumn. Meter replacement work focused on the oldest residential districts.

Operators completed scheduled filter backwash cycles at both plants. Supervisory control system patches were applied during low demand. The asset register was reconciled against field inspection records. Customer call volumes peaked during the summer irrigation season.

Customer call volumes peaked during the summer irrigation season. Chlorine residual targets were held within the permitted band all year. Public tours of the treatment plant resumed in the autumn. Watershed patrols documented erosion near several tributary crossings.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 5: Energy management

Tank inspections found coatings in fair to good condition. Public tours of the treatment plant resumed in the autumn. The authority continued its valve exercising program across the grid. Emergency response drills were held with neighboring utilities.

Emergency response drills were held with neighboring utilities. The asset register was reconciled against field inspection records. The authority continued its valve exercising program across the grid. Pump station upgrades improved efficiency at two booster sites.

Operators completed scheduled filter backwash cycles at both plants. Watershed patrols documented erosion near several tributary crossings. Pump station upgrades improved efficiency at two booster sites. School outreach programs reached classrooms across the service area.

Cross-connection control inspections continued at commercial sites. The authority continued its valve exercising program across the grid. Supervisory control system patches were applied during low demand. Hydrant flushing was performed on the published spring schedule.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 6: Watershed protection

Pump station upgrades improved efficiency at two booster sites. Laboratory staff processed routine bacteriological samples weekly. Billing system updates reduced the number of estimated reads. The authority published its consumer confidence report on time.

Meter replacement work focused on the oldest residential districts. Laboratory staff processed routine bacteriological samples weekly. Tank inspections found coatings in fair to good condition. Supervisory control system patches were applied during low demand.

The authority published its consumer confidence report on time. Meter replacement work focused on the oldest residential districts. Chlorine residual targets were held within the permitted band all year. The authority continued its valve exercising program across the grid.

Supervisory control system patches were applied during low demand. Tank inspections found coatings in fair to good condition. The asset register was reconciled against field inspection records. Watershed patrols documented erosion near several tributary crossings.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 7: Regulatory compliance

Tank inspections found coatings in fair to good condition. The authority published its consumer confidence report on time. Pump station upgrades improved efficiency at two booster sites. Public tours of the treatment plant resumed in the autumn.

Laboratory staff processed routine bacteriological samples weekly. Billing system updates reduced the number of estimated reads. Reservoir B usable storage capacity: 18.4 million gallons. Meter replacement work focused on the oldest residential districts. Operators completed scheduled filter backwash cycles at both plants.

The authority published its consumer confidence report on time. Emergency response drills were held with neighboring utilities. Laboratory staff processed routine bacteriological samples weekly. Customer call volumes peaked during the summer irrigation season.

School outreach programs reached classrooms across the service area. Customer call volumes peaked during the summer irrigation season. The authority continued its valve exercising program across the grid. Pump station upgrades improved efficiency at two booster sites.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 8: Information technology

Tank inspections found coatings in fair to good condition. The authority published its consumer confidence report on time. Hydrant flushing was performed on the published spring schedule. Supervisory control system patches were applied during low demand.

Hydrant flushing was performed on the published spring schedule. Operators completed scheduled filter backwash cycles at both plants. Public tours of the treatment plant resumed in the autumn. Chlorine residual targets were held within the permitted band all year.

Meter replacement work focused on the oldest residential districts. Tank inspections found coatings in fair to good condition. Billing system updates reduced the number of estimated reads. School outreach programs reached classrooms across the service area.

Chlorine residual targets were held within the permitted band all year. Supervisory control system patches were applied during low demand. Operators completed scheduled filter backwash cycles at both plants. Cross-connection control inspections continued at commercial sites.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 9: Fleet and facilities

Cross-connection control inspections continued at commercial sites. Supervisory control system patches were applied during low demand. The authority continued its valve exercising program across the grid. Public tours of the treatment plant resumed in the autumn.

The asset register was reconciled against field inspection records. The authority continued its valve exercising program across the grid. Supervisory control system patches were applied during low demand. Emergency response drills were held with neighboring utilities.

Tank inspections found coatings in fair to good condition. Meter replacement work focused on the oldest residential districts. Supervisory control system patches were applied during low demand. The asset register was reconciled against field inspection records.

Customer call volumes peaked during the summer irrigation season. Pump station upgrades improved efficiency at two booster sites. Laboratory staff processed routine bacteriological samples weekly. Hydrant flushing was performed on the published spring schedule.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 10: Community outreach

Hydrant flushing was performed on the published spring schedule. Supervisory control system patches were applied during low demand. The asset register was reconciled against field inspection records. Laboratory staff processed routine bacteriological samples weekly.

Meter replacement work focused on the oldest residential districts. Operators completed scheduled filter backwash cycles at both plants. Cross-connection control inspections continued at commercial sites. Tank inspections found coatings in fair to good condition.

The authority published its consumer confidence report on time. Public tours of the treatment plant resumed in the autumn. Customer call volumes peaked during the summer irrigation season. Meter replacement work focused on the oldest residential districts.

Operators completed scheduled filter backwash cycles at both plants. Laboratory staff processed routine bacteriological samples weekly. Hydrant flushing was performed on the published spring schedule. Meter replacement work focused on the oldest residential districts.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 11: Treatment plant operations

Watershed patrols documented erosion near several tributary crossings. Supervisory control system patches were applied during low demand. The authority continued its valve exercising program across the grid. Chlorine residual targets were held within the permitted band all year.

Tank inspections found coatings in fair to good condition. The asset register was reconciled against field inspection records. Emergency response drills were held with neighboring utilities. Laboratory staff processed routine bacteriological samples weekly.

Watershed patrols documented erosion near several tributary crossings. Cross-connection control inspections continued at commercial sites. Customer call volumes peaked during the summer irrigation season. Billing system updates reduced the number of estimated reads.

Public tours of the treatment plant resumed in the autumn. School outreach programs reached classrooms across the service area. Chlorine residual targets were held within the permitted band all year. Billing system updates reduced the number of estimated reads.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 12: Distribution system maintenance

Public tours of the treatment plant resumed in the autumn. Billing system updates reduced the number of estimated reads. Tank inspections found coatings in fair to good condition. Operators completed scheduled filter backwash cycles at both plants.

Chlorine residual targets were held within the permitted band all year. Operators completed scheduled filter backwash cycles at both plants. Public tours of the treatment plant resumed in the autumn. Laboratory staff processed routine bacteriological samples weekly.

The authority continued its valve exercising program across the grid. Watershed patrols documented erosion near several tributary crossings. Meter replacement work focused on the oldest residential districts. Customer call volumes peaked during the summer irrigation season.

Tank inspections found coatings in fair to good condition. Hydrant flushing was performed on the published spring schedule. Laboratory staff processed routine bacteriological samples weekly. Customer call volumes peaked during the summer irrigation season.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 13: Customer service

Meter replacement work focused on the oldest residential districts. Emergency response drills were held with neighboring utilities. Tank inspections found coatings in fair to good condition. The authority continued its valve exercising program across the grid.

Public tours of the treatment plant resumed in the autumn. The authority published its consumer confidence report on time. Meter replacement work focused on the oldest residential districts. The asset register was reconciled against field inspection records.

Operators completed scheduled filter backwash cycles at both plants. Chlorine residual targets were held within the permitted band all year. The asset register was reconciled against field inspection records. Public tours of the treatment plant resumed in the autumn.

Emergency response drills were held with neighboring utilities. Meter replacement work focused on the oldest residential districts. Public tours of the treatment plant resumed in the autumn. School outreach programs reached classrooms across the service area.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 14: Water quality monitoring

Operators completed scheduled filter backwash cycles at both plants. The asset register was reconciled against field inspection records. Public tours of the treatment plant resumed in the autumn. Hydrant flushing was performed on the published spring schedule.

Watershed patrols documented erosion near several tributary crossings. Hydrant flushing was performed on the published spring schedule. Cross-connection control inspections continued at commercial sites. Laboratory staff processed routine bacteriological samples weekly.

Billing system updates reduced the number of estimated reads. School outreach programs reached classrooms across the service area. The authority continued its valve exercising program across the grid. Chlorine residual targets were held within the permitted band all year.

Emergency response drills were held with neighboring utilities. Customer call volumes peaked during the summer irrigation season. The authority continued its valve exercising program across the grid. Cross-connection control inspections continued at commercial sites.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 15: Energy management

Emergency response drills were held with neighboring utilities. Watershed patrols documented erosion near several tributary crossings. Billing system updates reduced the number of estimated reads. Chlorine residual targets were held within the permitted band all year.

Public tours of the treatment plant resumed in the autumn. Chlorine residual targets were held within the permitted band all year. Customer call volumes peaked during the summer irrigation season. Tank inspections found coatings in fair to good condition.

Chlorine residual targets were held within the permitted band all year. School outreach programs reached classrooms across the service area. Hydrant flushing was performed on the published spring schedule. Watershed patrols documented erosion near several tributary crossings.

Operators completed scheduled filter backwash cycles at both plants. Public tours of the treatment plant resumed in the autumn. The authority continued its valve exercising program across the grid. Chlorine residual targets were held within the permitted band all year.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 16: Watershed protection

Tank inspections found coatings in fair to good condition. The authority continued its valve exercising program across the grid. Pump station upgrades improved efficiency at two booster sites. Watershed patrols documented erosion near several tributary crossings.

Meter replacement work focused on the oldest residential districts. Watershed patrols documented erosion near several tributary crossings. Emergency response drills were held with neighboring utilities. School outreach programs reached classrooms across the service area.

The authority published its consumer confidence report on time. Chlorine residual targets were held within the permitted band all year. The authority continued its valve exercising program across the grid. Laboratory staff processed routine bacteriological samples weekly.

Watershed patrols documented erosion near several tributary crossings. Cross-connection control inspections continued at commercial sites. The authority published its consumer confidence report on time. Chlorine residual targets were held within the permitted band all year.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 17: Regulatory compliance

School outreach programs reached classrooms across the service area. Meter replacement work focused on the oldest residential districts. The authority published its consumer confidence report on time. Cross-connection control inspections continued at commercial sites.

Customer call volumes peaked during the summer irrigation season. Watershed patrols documented erosion near several tributary crossings. Billing system updates reduced the number of estimated reads. Supervisory control system patches were applied during low demand.

The authority published its consumer confidence report on time. Customer call volumes peaked during the summer irrigation season. Emergency response drills were held with neighboring utilities. Hydrant flushing was performed on the published spring schedule.

Public tours of the treatment plant resumed in the autumn. School outreach programs reached classrooms across the service area. The authority continued its valve exercising program across the grid. The asset register was reconciled against field inspection records.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 18: Information technology

Hydrant flushing was performed on the published spring schedule. The authority published its consumer confidence report on time. Tank inspections found coatings in fair to good condition. Chlorine residual targets were held within the permitted band all year.

Meter replacement work focused on the oldest residential districts. Tank inspections found coatings in fair to good condition. Supervisory control system patches were applied during low demand. Watershed patrols documented erosion near several tributary crossings.

Operators completed scheduled filter backwash cycles at both plants. Customer call volumes peaked during the summer irrigation season. Public tours of the treatment plant resumed in the autumn. Cross-connection control inspections continued at commercial sites.

The authority published its consumer confidence report on time. Chlorine residual targets were held within the permitted band all year. Pump station upgrades improved efficiency at two booster sites. Tank inspections found coatings in fair to good condition.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 19: Fleet and facilities

Customer call volumes peaked during the summer irrigation season. Laboratory staff processed routine bacteriological samples weekly. Hydrant flushing was performed on the published spring schedule. The asset register was reconciled against field inspection records.

Billing system updates reduced the number of estimated reads. Public tours of the treatment plant resumed in the autumn. Meter replacement work focused on the oldest residential districts. Tank inspections found coatings in fair to good condition.

Customer call volumes peaked during the summer irrigation season. Pump station upgrades improved efficiency at two booster sites. Hydrant flushing was performed on the published spring schedule. Chlorine residual targets were held within the permitted band all year.

Hydrant flushing was performed on the published spring schedule. School outreach programs reached classrooms across the service area. Cross-connection control inspections continued at commercial sites. Watershed patrols documented erosion near several tributary crossings.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 20: Community outreach

Laboratory staff processed routine bacteriological samples weekly. The authority published its consumer confidence report on time. Chlorine residual targets were held within the permitted band all year. Pump station upgrades improved efficiency at two booster sites.

Watershed patrols documented erosion near several tributary crossings. Emergency response drills were held with neighboring utilities. Pump station upgrades improved efficiency at two booster sites. The asset register was reconciled against field inspection records.

The asset register was reconciled against field inspection records. Operators completed scheduled filter backwash cycles at both plants. Supervisory control system patches were applied during low demand. Billing system updates reduced the number of estimated reads.

The authority continued its valve exercising program across the grid. Public tours of the treatment plant resumed in the autumn. Chlorine residual targets were held within the permitted band all year. Emergency response drills were held with neighboring utilities.

Section 42: Distribution system maintenance

Tank inspections found coatings in fair to good condition. Billing system updates reduced the number of estimated reads. The authority continued its valve exercising program across the grid. School outreach programs reached classrooms across the service area.

Meter replacement work focused on the oldest residential districts. Pump station upgrades improved efficiency at two booster sites. Laboratory staff processed routine bacteriological samples weekly. Public tours of the treatment plant resumed in the autumn.

The asset register was reconciled against field inspection records. Watershed patrols documented erosion near several tributary crossings. Operators completed scheduled filter backwash cycles at both plants. Billing system updates reduced the number of estimated reads.

The authority continued its valve exercising program across the grid. Supervisory control system patches were applied during low demand. Billing system updates reduced the number of estimated reads. Tank inspections found coatings in fair to good condition.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 43: Customer service

The authority continued its valve exercising program across the grid. Laboratory staff processed routine bacteriological samples weekly. The asset register was reconciled against field inspection records. Meter replacement work focused on the oldest residential districts.

Customer call volumes peaked during the summer irrigation season. Operators completed scheduled filter backwash cycles at both plants. Watershed patrols documented erosion near several tributary crossings. Pump station upgrades improved efficiency at two booster sites.

Chlorine residual targets were held within the permitted band all year. Public tours of the treatment plant resumed in the autumn. Operators completed scheduled filter backwash cycles at both plants. Laboratory staff processed routine bacteriological samples weekly.

Laboratory staff processed routine bacteriological samples weekly. Pump station upgrades improved efficiency at two booster sites. Public tours of the treatment plant resumed in the autumn. Billing system updates reduced the number of estimated reads.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 44: Water quality monitoring

The asset register was reconciled against field inspection records. Emergency response drills were held with neighboring utilities. Laboratory staff processed routine bacteriological samples weekly. Watershed patrols documented erosion near several tributary crossings.

The authority published its consumer confidence report on time. Chlorine residual targets were held within the permitted band all year. School outreach programs reached classrooms across the service area. Pump station upgrades improved efficiency at two booster sites.

The authority continued its valve exercising program across the grid. Laboratory staff processed routine bacteriological samples weekly. The authority published its consumer confidence report on time. Watershed patrols documented erosion near several tributary crossings.

Hydrant flushing was performed on the published spring schedule. Customer call volumes peaked during the summer irrigation season. School outreach programs reached classrooms across the service area. Billing system updates reduced the number of estimated reads.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 45: Energy management

Watershed patrols documented erosion near several tributary crossings. Laboratory staff processed routine bacteriological samples weekly. The asset register was reconciled against field inspection records. Supervisory control system patches were applied during low demand.

Hydrant flushing was performed on the published spring schedule. Pump station upgrades improved efficiency at two booster sites. Chlorine residual targets were held within the permitted band all year. Cross-connection control inspections continued at commercial sites.

Hydrant flushing was performed on the published spring schedule. Laboratory staff processed routine bacteriological samples weekly. Operators completed scheduled filter backwash cycles at both plants. Pump station upgrades improved efficiency at two booster sites.

Hydrant flushing was performed on the published spring schedule. Chlorine residual targets were held within the permitted band all year. Supervisory control system patches were applied during low demand. Operators completed scheduled filter backwash cycles at both plants.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 46: Watershed protection

Watershed patrols documented erosion near several tributary crossings. The asset register was reconciled against field inspection records. Customer call volumes peaked during the summer irrigation season. Emergency response drills were held with neighboring utilities.

Operators completed scheduled filter backwash cycles at both plants. Supervisory control system patches were applied during low demand. Cross-connection control inspections continued at commercial sites. Meter replacement work focused on the oldest residential districts.

Watershed patrols documented erosion near several tributary crossings. Billing system updates reduced the number of estimated reads. Tank inspections found coatings in fair to good condition. Customer call volumes peaked during the summer irrigation season.

The authority continued its valve exercising program across the grid. Meter replacement work focused on the oldest residential districts. Operators completed scheduled filter backwash cycles at both plants. The authority published its consumer confidence report on time.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 47: Regulatory compliance

Watershed patrols documented erosion near several tributary crossings. The asset register was reconciled against field inspection records. Cross-connection control inspections continued at commercial sites. Emergency response drills were held with neighboring utilities.

The asset register was reconciled against field inspection records. Watershed patrols documented erosion near several tributary crossings. Supervisory control system patches were applied during low demand. Laboratory staff processed routine bacteriological samples weekly.

Operators completed scheduled filter backwash cycles at both plants. Customer call volumes peaked during the summer irrigation season. The authority continued its valve exercising program across the grid. Tank inspections found coatings in fair to good condition.

Billing system updates reduced the number of estimated reads. Chlorine residual targets were held within the permitted band all year. Emergency response drills were held with neighboring utilities. Meter replacement work focused on the oldest residential districts.

NORTHWIND MUNICIPAL WATER AUTHORITY - 2025 ANNUAL OPERATIONS REPORT

Section 48: Information technology

The authority published its consumer confidence report on time. Public tours of the treatment plant resumed in the autumn. Chlorine residual targets were held within the permitted band all year. Billing system updates reduced the number of estimated reads.

Pump station upgrades improved efficiency at two booster sites. The asset register was reconciled against field inspection records. Operators completed scheduled filter backwash cycles at both plants. Public tours of the treatment plant resumed in the autumn.

Public tours of the treatment plant resumed in the autumn. Chlorine residual targets were held within the permitted band all year. The asset register was reconciled against field inspection records. Pump station upgrades improved efficiency at two booster sites.

The asset register was reconciled against field inspection records. School outreach programs reached classrooms across the service area. The authority continued its valve exercising program across the grid. Tank inspections found coatings in fair to good condition.
